

SpeediCath® Compact

Discreet and easy-to-use intermittent catheters for men and women

- Ready for instant use
- Discreet design
- Free from PVC and phthalates

SpeediCath® Compact male and female

Many end-users have identified the lack of discretion around their use of catheters as an important issue. SpeediCath Compact is designed to meet that need

A revolution in catheter design

SpeediCath Compact is a 100% PVC-free sterile and hydrophilic coated intermittent catheter. Less than half the size of a standard catheter, SpeediCath Compact can be stored, carried, used and disposed of more discreetly. It can be inserted without touching the coated section and it comes ready-to-use for even greater convenience and discretion.

Increased safety

Hygienic insertion is achieved through a unique non-touch grip and sterile saline solution inside the packaging. This ensures that fingers do not touch the catheter and eliminates the need to soak it prior to insertion, reducing contact points with the septic environment.

The hydrophilic coating covers the catheter surface as well as the inside of the catheter eyelets, thus reducing friction between the catheter and the urethral tract and minimizing any risk of long term damage.

SpeediCath Compact for males

Is the first truly discreet catheter for men. Sleek, compact and ready-to-use, SpeediCath Compact Male offers a number of advantages over regular catheters: more convenient to store, carry and dispose of, increased hygiene and control and as safe and efficient as regular SpeediCath.

A complete system

Coloplast Continence Care includes Conveen urisheaths and 3 different urine bags. Together with EasiCath and SpeediCath intermittent catheters, this is a complete system of high-quality appliances for people with bladder emptying problems.

SpeediCath Compact and Compact Plus for females

Two lengths, one superior fit SpeediCath Compact and SpeediCath Compact Plus are the safe, discreet choices for women who self-catheterize. SpeediCath Compact is designed to fit the short length of the female urethra, and, when unopened, it is no longer than a lipstick.

Two centimeters longer, SpeediCath Compact Plus is the ideal for women who require a longer catheter. Both catheters allow for safe, effective and more hygienic catheterization with minimal friction and discomfort.

Product composition:

Female

Thermoplastic polyurethane (TPU), polyvinylpyrrolidone (PVP), water.

Male

Polypropylene (PP), thermoplastic elastomer (TPE), ethylene vinyl acetate, copolymer (EVA), polyurethane (TPU), methylmethacrylate, acrylonitrile-butadiene-styrene (MABS).
